**Ad V:**

Reference is made to the following document:

D1: US-A-6470693

The subject-matter of independent claim 1 differs from D1 in that cooler-condenser and reheater are disposed in a single pressure vessel and in that the cooler-condenser is a direct contact heat exchanger.

The use of a direct contact heat exchanger avoids the need for a cooler which has to resist to the high pressure of the compressed gas and reduces pressure loss.

The problem of reducing pressure loss and of avoiding expensive gas coolers has been solved in a non obvious way. None of the available prior art documents discloses the combination of direct gas cooler, drain and reheater as claimed, nor does the prior art give a hint which would lead the skilled person to such a combination.

The application meets the requirements of Art. 33 PCT.
